

Polypropylene Wellheads for PVC Casings

Give your borehole the professional look

*Stay safe, stay legal: Quality wellhead solutions, designed to fit, from Proquip.
Helping protect groundwater and your borehole supply from contamination.*

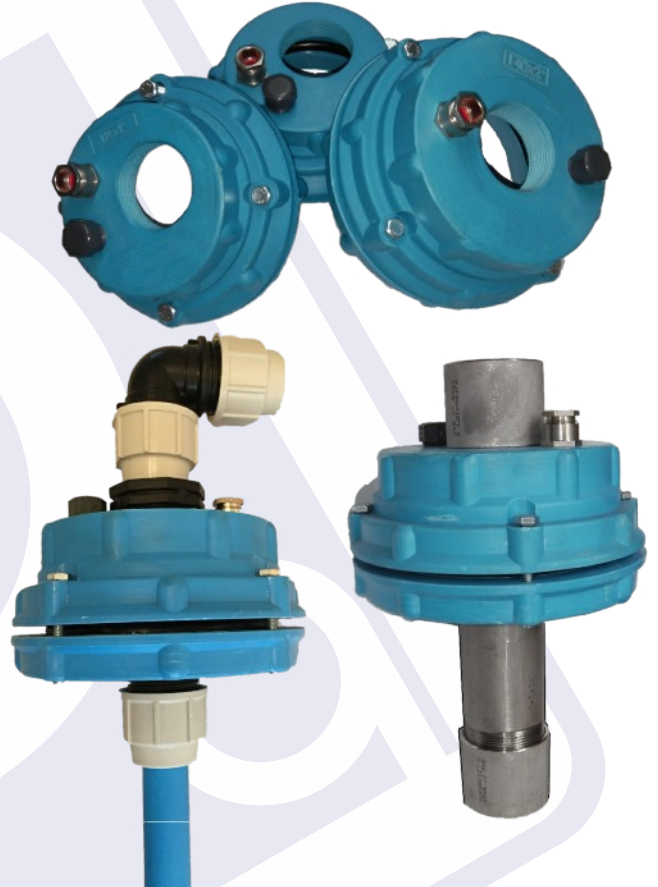

Tried and tested in the field, our polypropylene wellheads provide a snug fit and neat, professional finish to PVC casings. There's no surprises from the engineering. Quality built, Durable and Hygienic, they offer all the reliability and performance you expect of Proquip's product pedigree.

Wellhead Features

The polypropylene wellhead consists of two parts: the upper wellhead section onto which the rising main is secured and the lower section which slides over the well casing. The wellhead seals onto the casing with a heavy duty O-ring. The two components are held together by four galvanised securing bolts. The wellhead includes a cable gland and dipping port.

Wellhead Benefits

- Manufactured from a special tough polypropylene compound which is resistant to corrosion by any chemicals normally found in groundwater
- Designed for fast, fuss-free installation in two easy steps: slide onto the casing and clamp-up the O-ring
- Light weight and compact.
- High impact resistance.
- Through holes are 2" parallel BSP threaded.
- Larger wellheads are available upon request.

Optional Stainless Steel Through Pipe

The polypropylene wellheads can be supplied with a 2" stainless steel through pipe - with optional 1½" reducing bush - for simple connection to the rising main. (Part No. 592-TPSS2)

Product Code	Casing Size OD mm	Through Hole Size	Height mm	Gland Size	Max Loading	Dipping Port Size
591-TP115PV2	115mm	2" BSP	80mm	13mm	900kg	20mm
591-TP125PV2	125mm	2" BSP	95mm	13mm	900kg	20mm
591-TP140PV2	140mm	2" BSP	100mm	13mm	1100kg	20mm
